Reasons for Allowance

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

While Bergstrom discloses a system for controlling an electromagnetic actuator (solenoid) using the minimum possible amount of information from the system. Merkel (newly cited reference) teaches the driver circuit used to control the solenoid current so that it makes a gradual transition from the peak solenoid current level to a steady state hold-in current using either a pull-in voltage or a hold-in voltage.

And Schmitz (newly cited reference) teaches increasing a cast-off speed of an armature from pole of an electromagnet of an electromagnetic actuator including switching of holding current in order to launch the armature from the pole wherein the cast-off current has a polarity opposite to the polarity of the holding current.

None of these references taken either alone or in combination discloses a method and device controlling an electromechanical valve assembly having all the claimed features of applicant's instant invention, specifically including: "holding said voltage at said second polarity for a predetermined time period at a predetermined amplitude to decrease said induced current, said predetermined time period or said predetermined amplitude being determined based on said induced current". Also, there is no motivation to combine the Bergstrom reference with the Merkel reference or Schmitz reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
